INTEROFFICE MEMO
LONGVIEW FIBRE COMPANY

DATE: July 6, 1993

FROM: Craig McKinney

TO: Branch Plant Managers

COPIES: RGG RGE ADW RFF

SUBJECT: Clean Air Act; Protection of Stratospheric Ozone;
Proposed Rule

As you recall I sent you a memo last September stating we had until January 1, 1995 to complete phase out of products containing Montreal Protocol Chemicals (also known as ozone depleting chemicals). This is no longer true. On March 18, 1993 the EPA issued a new proposed rule on ozone depleting chemicals. The proposed rule has moved up our date to January 1, 1994. The table shows the production rate allowed in percent of the 1989 production rate for the different classes of ozone depleting chemicals.

Date (1/1/XX)	CFC	Halons	CCl4	C2H3Cl3
1994	25	0	50	50
1995	15	0	15	30
1996	0	0	0	0

As you can see the supply of these chemicals will drop sharply after January 1, 1994 and be zero by January 1, 1996. It will no longer be cost effective to use products containing Class I Montreal Protocol chemicals simply due to supply and demand. The proposed rule has also moved up the dates for Class II chemicals. The phase out of Class II chemicals will commence January 1, 2003 and has a completion date of January 1, 2030.

Another requirement of this act is to label all products which use these chemicals in the manufacturing process. R. G. Elliott addressed this in a memo to you on October 19, 1992. If you have any questions please contact either Dick Elliott or myself here at the Longview office.

X
Enclosed is a list of products containing Montreal Protocol Class I Chemicals used at your plant according to our records. If you have not sent us a recent update of MSDS's used at your plant please check the new products for these chemicals. Please inform us as you replace these chemicals so that we can keep our records up to date. Also enclosed is a list of Montreal Protocol Class I chemicals with known synonyms.
